**Introduction**

Briefly explain why this research is important and what was the aim of the research. Keep the section brief and simple, so that any reader can, in a couple of sentences, understand what was done, and why.

- This research is important because...
- The aim of this research was...

**Body**

Describe important results from recent and/or previous primary literature. Explain how those results shape the current understanding of the topic. Mention the types of experiments done, and their corresponding data (by you or other authors) if applicable, but do not repeat the experimental procedure step by step. Point out and address any controversies in the field and give your **opinion** on each issue (a must).

- Previous results from... are important in shaping our understanding of...
- The following experiments show...

**Results and Discussion**

Summarize the results by presenting the collected data and its statistical treatment. Include only relevant data with sufficient detail to properly justify the conclusion. When discussing the results, be objective, point out the features and limitations of the work, and briefly state the logical implications of the results.

- The results of this research show that...
- This research has contributed towards...

**Conclusion**

Formulate the conclusion based on the evidence presented in the Results and Discussion section by interpreting the research findings into a strong closing statement. The conclusion should be brief, summarizing the major points succinctly and pointing out the significance of the results, and can also discuss open questions that remain in the area of research, or future directions that the research could undertake.

- Given the summary of results, this research shows that...

**Keywords:** Write 3 to 8 keywords or phrases concerning the research.
